

ESG InstaGraphic: Velostrata: Delivering Cloud Workload Mobility

Why This Matters

- Organizations still struggle with barriers to public cloud computing, as performance, cost, complexity, and vendor lock-in remain primary concerns.
- ESG Lab validated the ease of moving a workload to the cloud in minutes, leaving storage on-premises. Organizations can move workloads to the cloud on demand without degrading performance or changing applications, storage, or management processes.
- The Velostrata solution delivers workload mobility, with the freedom to extend data centers to and from the cloud, while minimizing costs, complexity, and migration time.
